Manage license

Network installation location
Select network installation location.

Network installation could not be found. Please select network location where product was installed. You can also specify secondary (backup) network location, which will be used if primary location is not available.

Make sure to enter the location in the UNC syntax even if the files are available on the local disk. Do not use the syntax with local or mapped drives.

For example: if you are sharing the folder C:\Application as 'Application' on the 'Server', the UNC path to the location is '\\Server\Application'.
